0.1 Gliederung

- Einführung in OpenCV
- Motivation
- Anwenderfeatures
- Gui-Demo
- Dokumentation
- Architektur
- API
- Ausblick

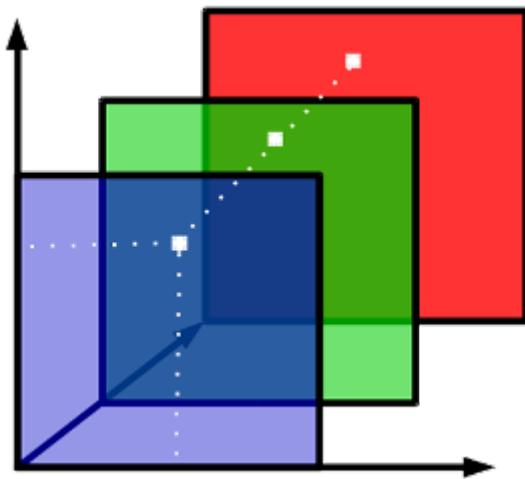

1 Einführung in OpenCV

1.1 Überblick

- Bildverarbeitung
- weite Verbreitung
- Matrizen als Grundlage
- Filter + Matches

1.2 Matrizen

Bild = mehrdimensionale Matrix

Bsp. BGR-Bild: 1. Channel blau, 2. Channel grün usw.

1.3 Filter

Berechnung auf Umgebung jedes Pixels

5	7	3	5	5	5
3	2	6	7	6	5
2	3	2	4	6	6
3	3	5	6	4	5
1	4	6	2	2	4
3	4	7	5	6	5

1.4 Filter

Beispiel dilate: helle Flächen werden größer

1.5 Filter

Beispiel dilate: helle Flächen werden größer

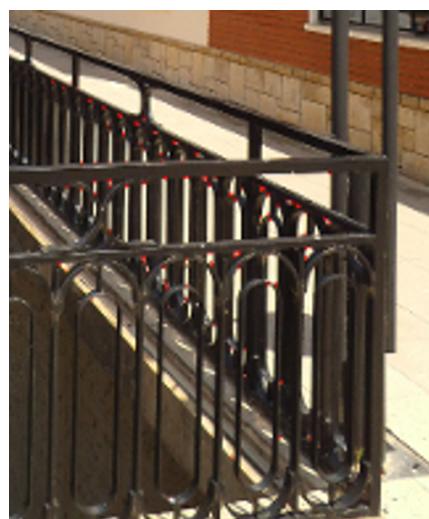

1.6 Filter

Beispiel dilate: helle Flächen werden größer

1.7 Matches

Keypoints = charakteristische Punkte

1.8 Matches

Match = Paar aus Keypoints

2 Motivation

2.1 Debuggen von OpenCV

Systematisches Debugging statt „Random Code“

```
#ifdef DEBUG
    Mat img_matches;
    drawMatches( img_1, keypoints_1, img_2, keypoints_2,
                 good_matches, img_matches, Scalar::all(-1), Scalar::all(-1),
                 vector<char>(), DrawMatchesFlags::NOT_DRAW_SINGLE_POINTS );
    imshow("good matches", img_matches);
#endif
```

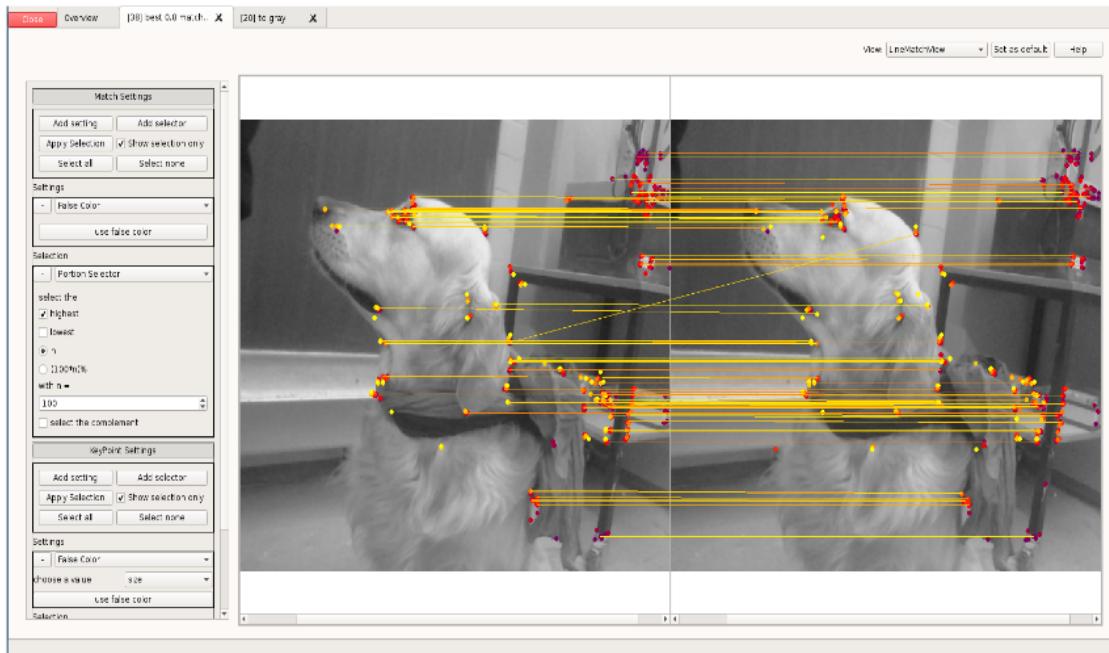

versus

```
cvv::debugMatches(img1, img2, keypoints_1, keypoints_2, good_matches);
```

Hinweis auf showMatches/showKeypoints

2.2 Ziele

Visualisierung von Matritzen, Filtereffekten und Matches

3 Anwenderfeatures

3.1 Verwendung

```
std::string imgIdString = "imgRead" + toString(imgId);
cvv::showImage(imgRead, CVVISUAL_LOCATION, imgIdString);
```

```
// convert to grayscale:
cv::Mat imgGray;
cv::cvtColor(imgRead, imgGray, CV_BGR2GRAY);
cvv::debugFilter(imgRead, imgGray, CVVISUAL_LOCATION,
                 "to gray", "SingleFilterView");
```

3.10 Matches

- Anzeigen / Filtern von Keypoints / Matches
- Anzeige der Translation von Keypoints

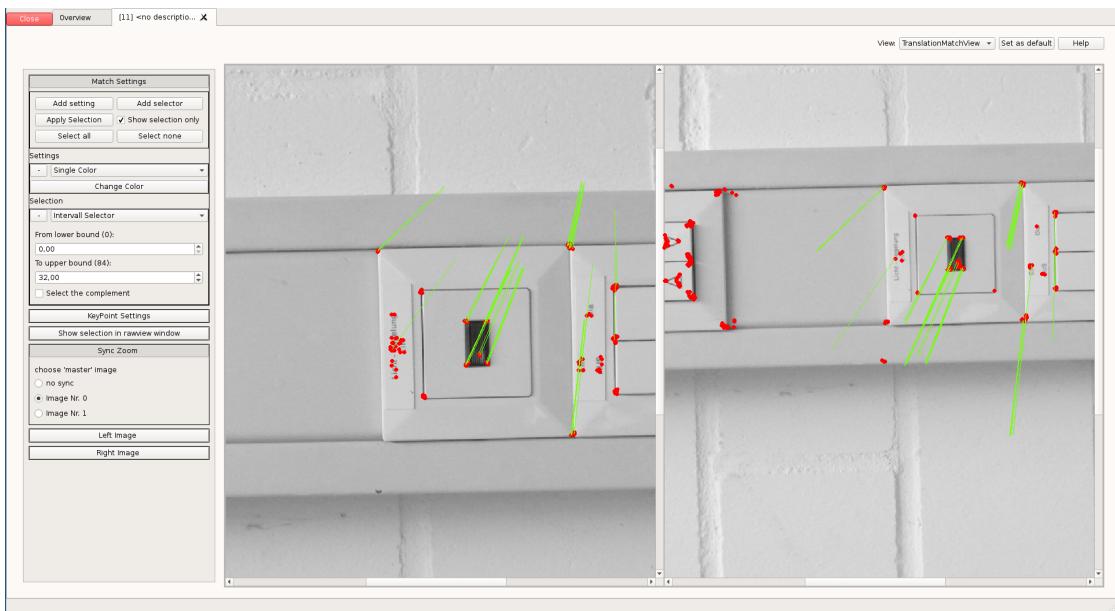

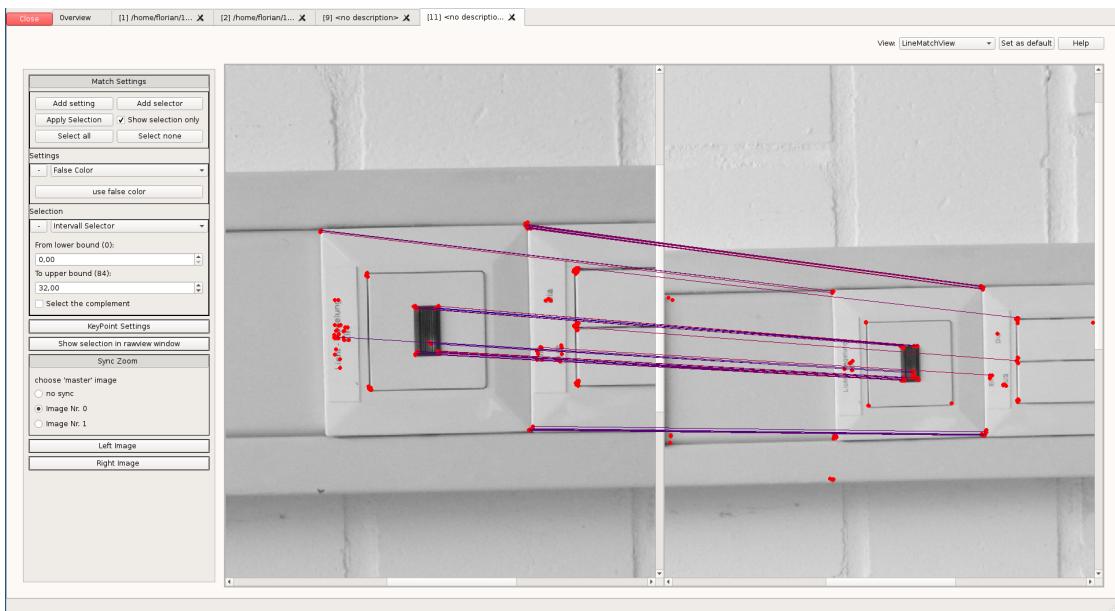

4 GUI-Demo

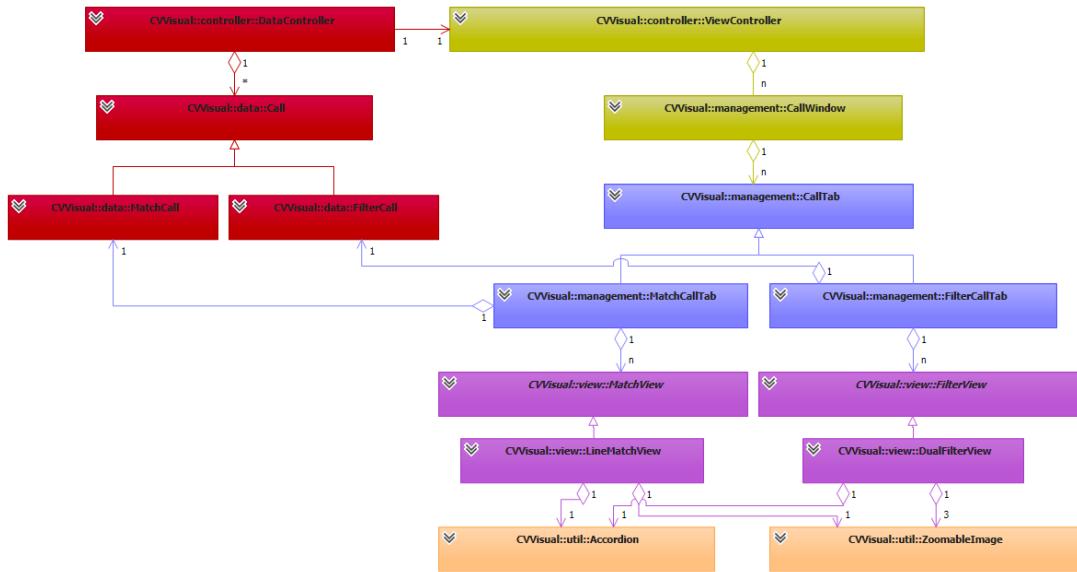

5 Architektur

5.1 Entwurf

5.2 Signals/Slots & Templates

```
class SlotQString : public QObject
{
    Q_OBJECT
public:
    SlotQString(const std::function<void(QString)> &f, QObject *parent = nullptr)
        : QObject{ parent }, function_{f}
```

```

{   if (!f)
        throw std::invalid_argument{ "invalid function" };
}
public slots:
void slot(QString t) const
{function_(t);}
private:
std::function<void(QString)> function_;
};
```

5.3 RegisterHelper

- Ermöglicht die Auswahl von Funktionen über eine Combobox
- Funktionen werden über eine API Funktion registriert
- Wird in der API Demo vorgestellt

```

cvv::qtutil::registerMatchSettings<cvv::qtutil::SingleColorMatchPen>("Single Color");

template <class Setting>
bool registerMatchSettings(const QString &name)
{
    return MatchSettingsSelector::registerElement(
        name, [](std::vector<cv::DMatch> univers)
    {
        return std::unique_ptr<MatchSettings>{ new Setting{univers}};
    });
}
```

```
});  
}
```

6 Dokumentation

6.1 Tutorials, Beispiele

The screenshot shows a web browser window titled "CVVisual : CVVisual Example". The URL is "cv.mustlynerdless.de". The page content is titled "CVVisual Example". It includes a sidebar with links like "Home", "TUTORIAL", "REFERENCE", and "API Reference". The main content area contains a code snippet from "code_example/main.cpp":

```
10 #include <opencv2/debug_mode.hpp>  
11 #include <opencv2/show_image.hpp>  
12 #include <opencv2/filter.hpp>  
13 #include <opencv2/dmatch.hpp>  
14 #include <opencv2/final_show.hpp>
```

Below the code, there is explanatory text: "It takes 10 snapshots with the webcam. With each, it first shows the image alone in the debug window, then converts it to grayscale and calls CVVisual with the original and resulting image." There are also some code snippets at the bottom.

6.2 Kurzdokumentation

Wird von der Hilfefunktion des Programms benutzt.

6.3 Referenz:

- Mit Hilfe von Doxygen

7 API

7.1 Anwender API

- Triviale Benutzung auch in C++98
- Sehr klein und übersichtlich

 Views
 Filter query language
 API Reference

Views

General information:

Most views offer an `ImageInformation` collapsable in their accordion menus.
 The zoom can be found here.
`Ctrl + Mouse wheel` is also zoom; `Ctrl + Shift + Mouse wheel` is a slower zoom.
 If the zoom is deeper than 60%, the image's pixels will be overlaid with their channel values; usually, the order is `BGR[+alpha]` from the top.

Single Image View:

Associated with the `debugSingleImage()` function.
 Shows one single image with no features other than `Image Information`.

Filter Views:

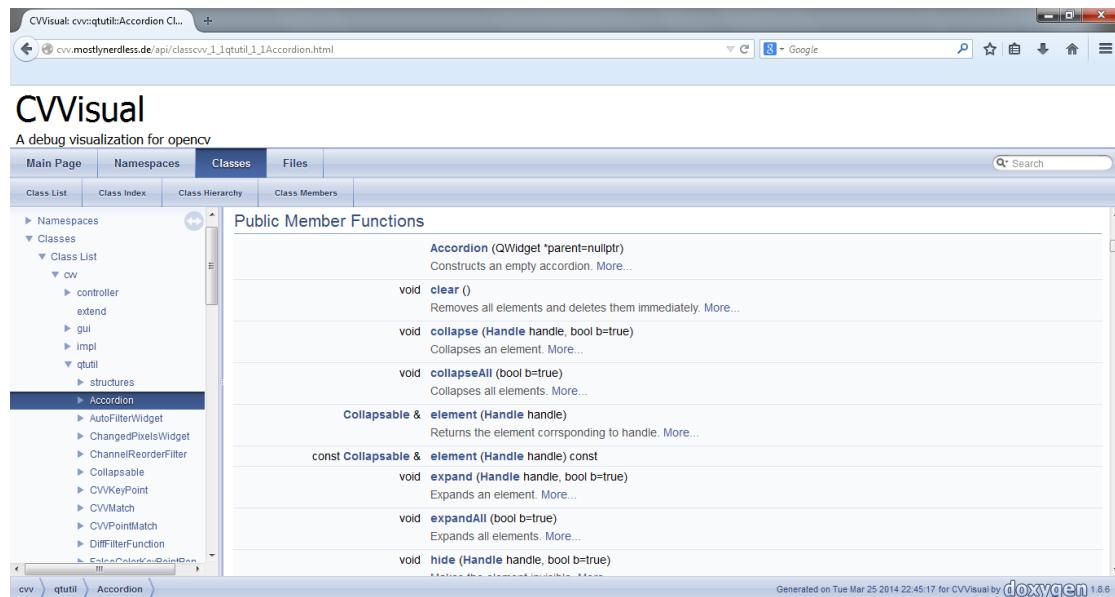

Associated with the `debugFilter()` function.

DefaultFilterView:

Shows two images with only the basic features of `ImageInformation`, synchronized zoom and `Histogram`.

DualFilterView:

Shows the two images given to the CVVisual function and `Result Image` inbetween which represents the result of a filter that was applied to the others via the `Filter selection` collapsable, like a difference image between the two.

The screenshot shows a web browser displaying the CVVisual API documentation. The URL in the address bar is `cvvisual: cvv:qutil:Accordion Cl...`. The page title is "CVVisual" and the subtitle is "A debug visualization for opencv". The navigation menu at the top includes "Main Page", "Namespaces", "Classes" (which is selected), and "Files". A search bar is located at the top right. The main content area has tabs for "Class List", "Class Index", "Class Hierarchy", and "Class Members". The "Class Members" tab is active, showing the "Public Member Functions" section. The "Accordion" class is highlighted in the class list. The member functions listed are:

- `Accordion (QWidget *parent=nullptr)` - Constructs an empty accordion. More...
- `void clear ()` - Removes all elements and deletes them immediately. More...
- `void collapse (Handle handle, bool b=true)` - Collapses an element. More...
- `void collapseAll (bool b=true)` - Collapses all elements. More...
- `Collapsible & element (Handle handle)` - Returns the element corresponding to handle. More...
- `const Collapsible & element (Handle handle) const`
- `void expand (Handle handle, bool b=true)` - Expands an element. More...
- `void expandAll (bool b=true)` - Expands all elements. More...
- `void hide (Handle handle, bool b=true)`

At the bottom right of the page, it says "Generated on Tue Mar 25 2014 22:45:17 for CVVisual by doxygen 1.8.6".

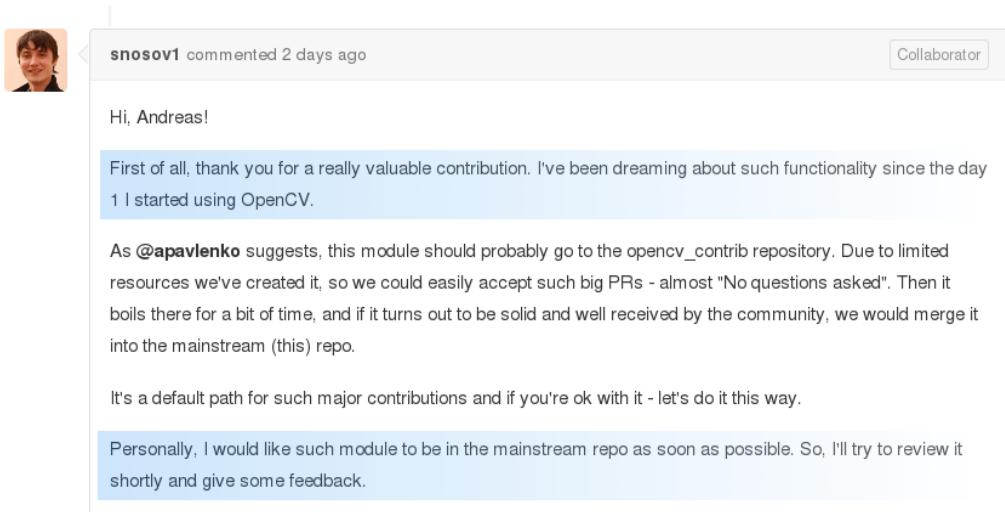

7.2 Interne API

- Erweiterung über Funktionen in `cvv::extend`
- Leichtes, zentralisiertes Hinzufügen von Visualisierungen, Filtern, Views,...

8 Ausblick

8.1 Rezeption

Projekt schien von der OpenCV-Community wohlwollend aufgenommen zu werden

8.2 Rezeption

Nach aktuellem Stand aber aufgrund C++11 und Qt5 keine Aufnahme ins Haupt-Repo

- Dokumentation: <https://cvv.mostlynerdless.de/>
- Doxygen: <https://cvv.mostlynerdless.de/api/>

snosov1 commented on 19. Apr.

Sorry for delay. I've looked through it right away, and they're a couple of issues. Mainly, we don't plan to enable C++11 for builds of this repository, since the support is not yet ubiquitous. Also, the usage of Qt5 is rather limiting.

This makes it a great tool for development and research on Desktops with latest sw, but is unusable on other platforms.

My thinking is that in its current form it doesn't belong to the mainstream repo because of these dependencies. But, I think, it can be merged to the contrib repo after a few minor fixes.

Let's also ask [@kirill-konyakov](#) on that.
